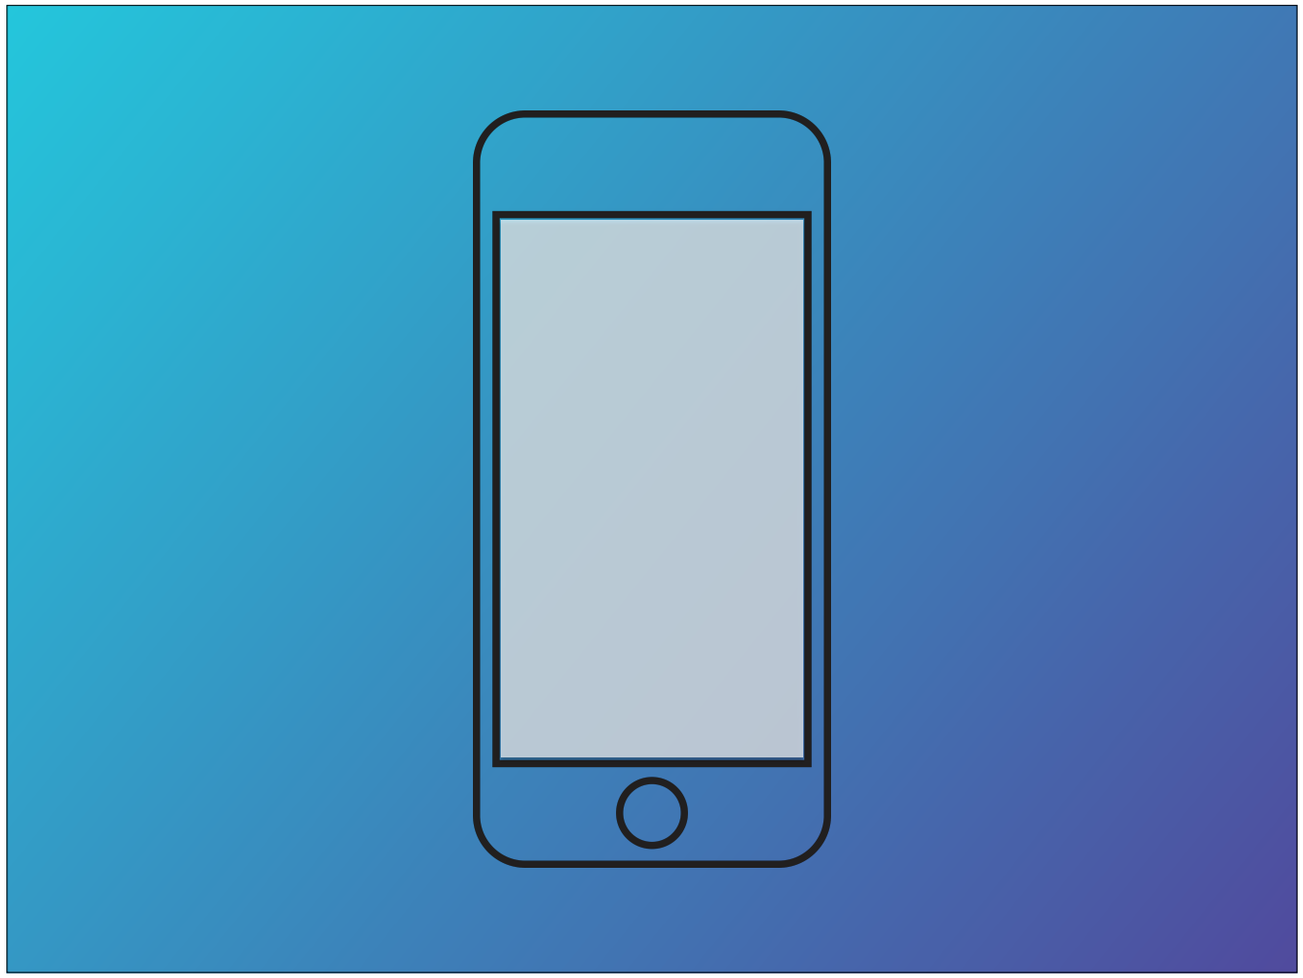
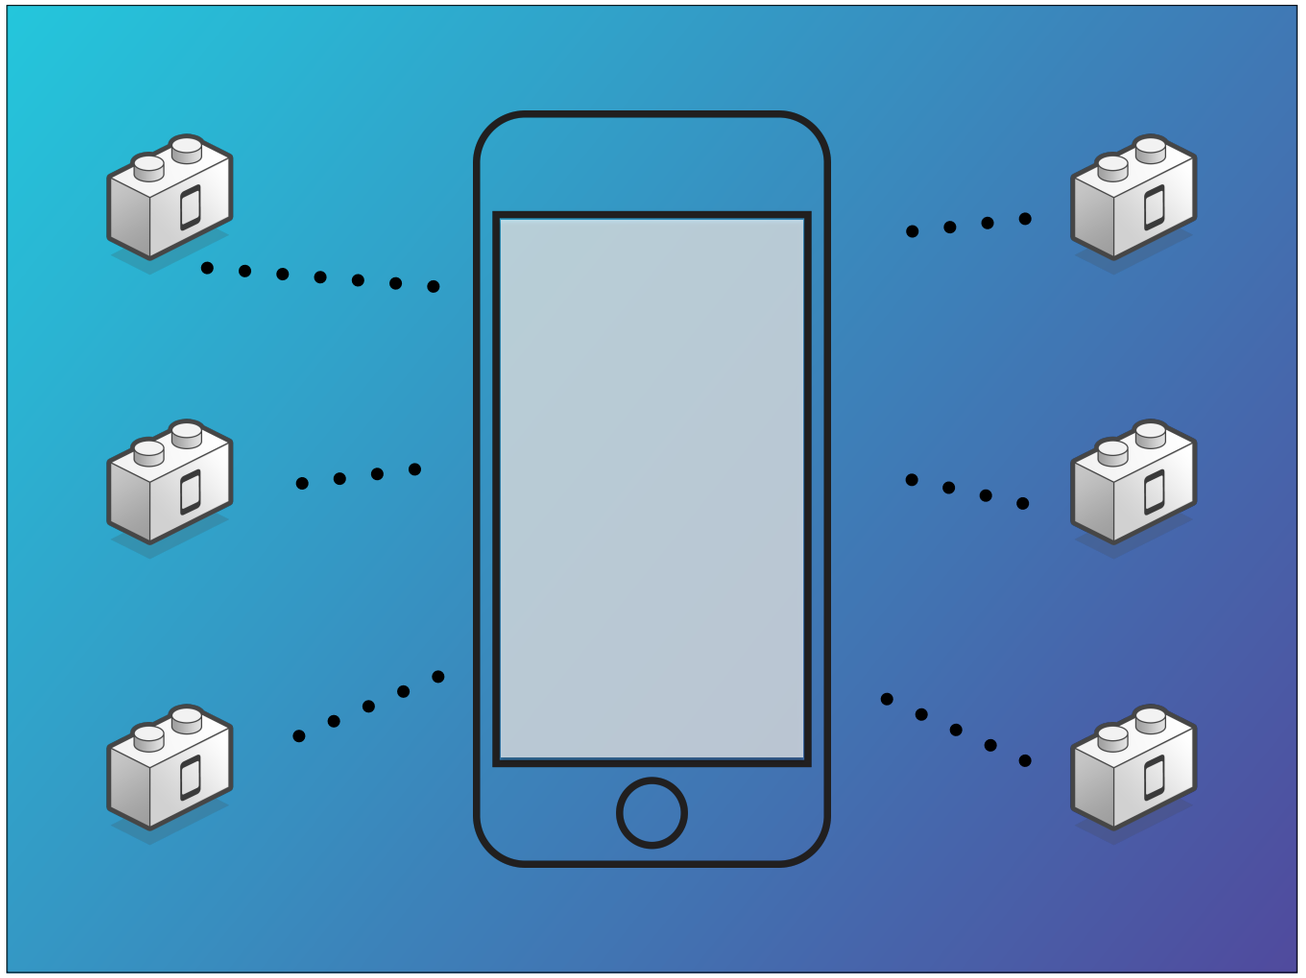
tarifa
Automate your cordova workflow with tarifa CLI

Paul Panserrieu
@42loops

Apache Cordova



the web view, un navigateur sans contrôles utilisateur



Plugins to fill the gap

un écosystème de plus en plus divers: avec un mix de tools (ide, et cli) de de produits saas.

LOCK IN

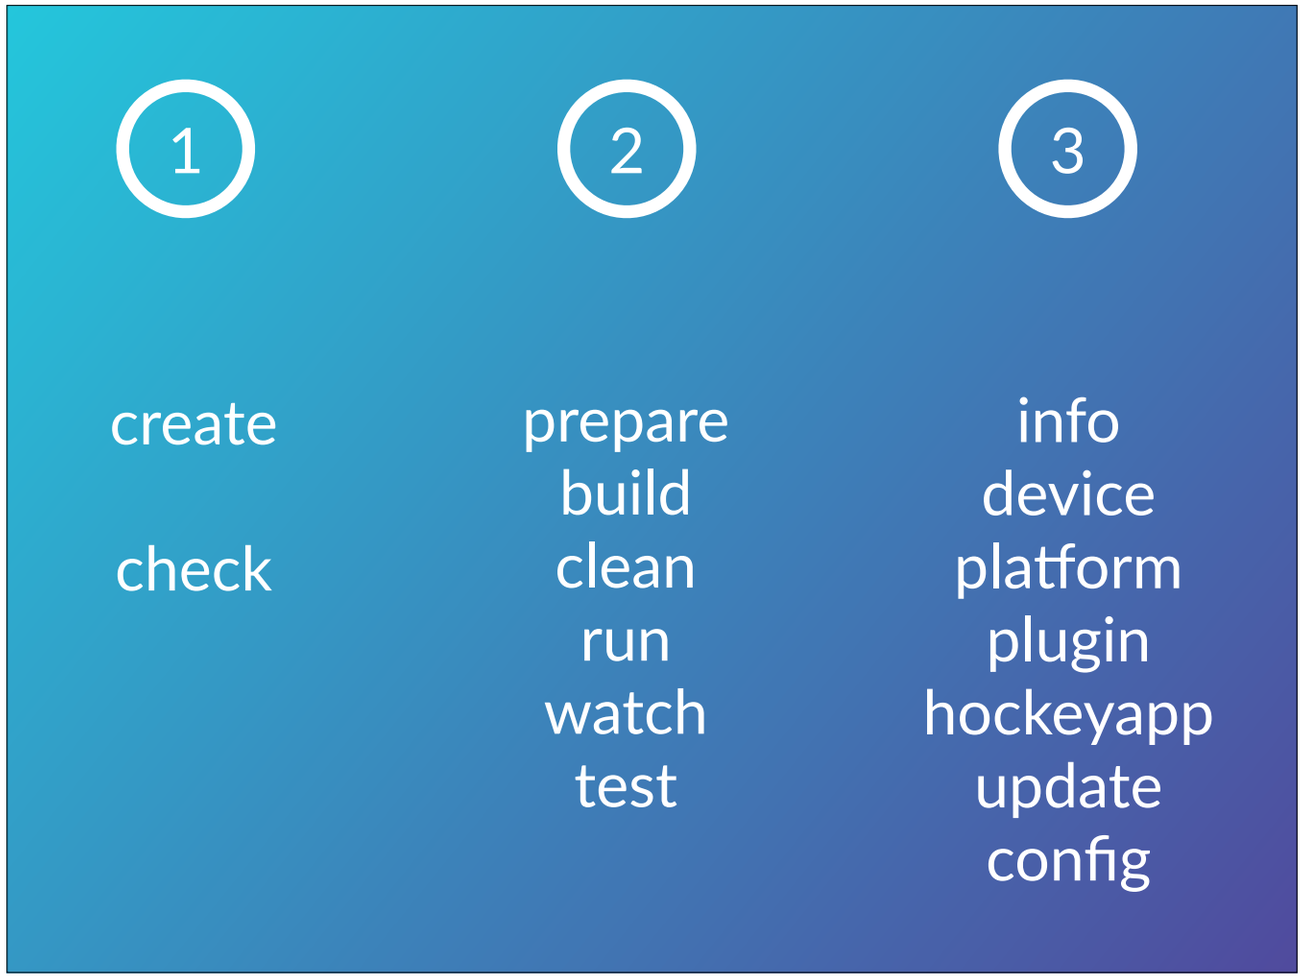
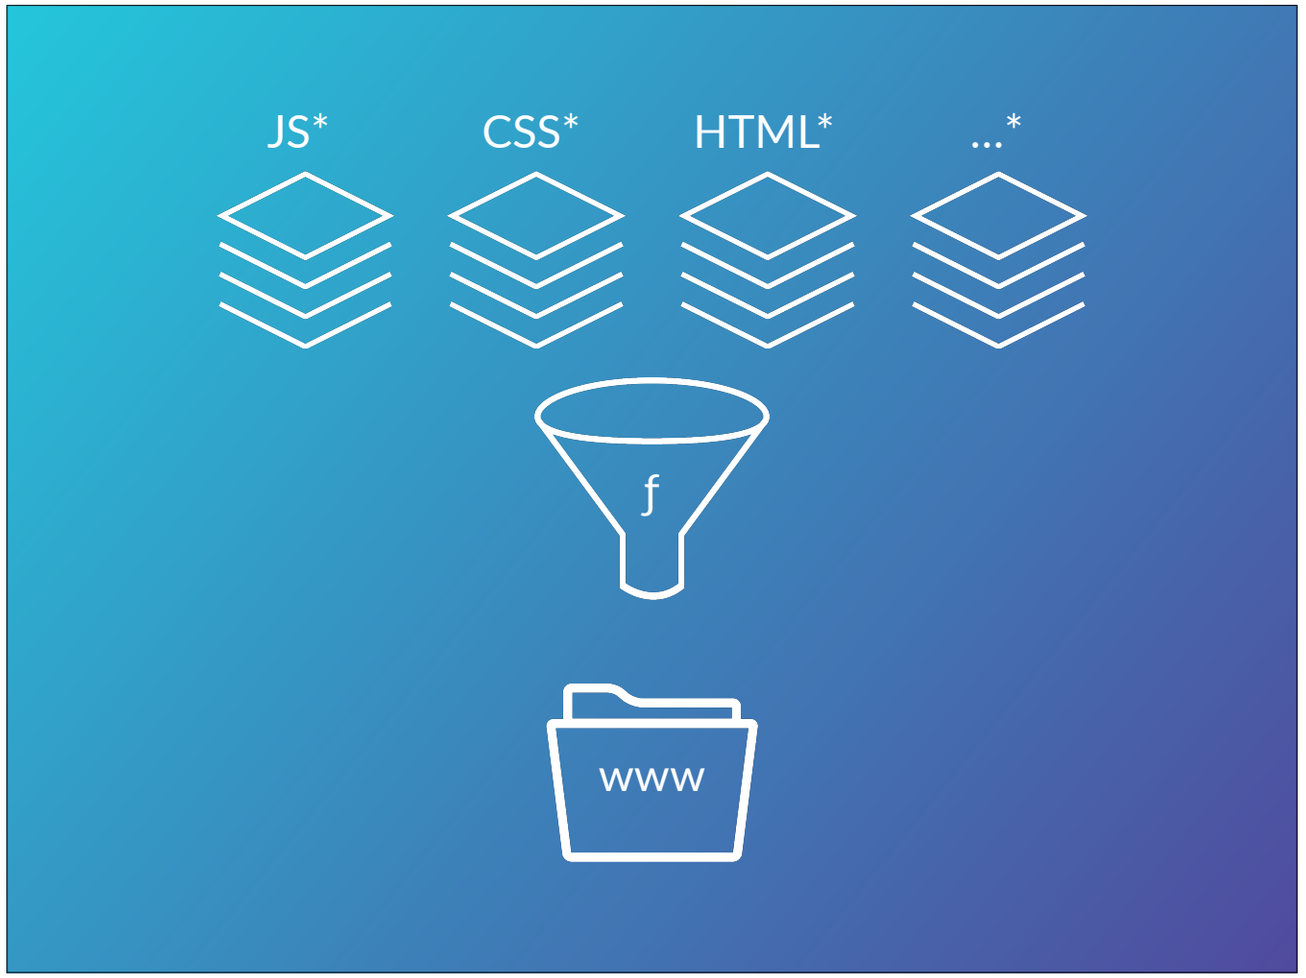
CHALK



3 types de sub commandes

build system

dev workflow -> build system ????



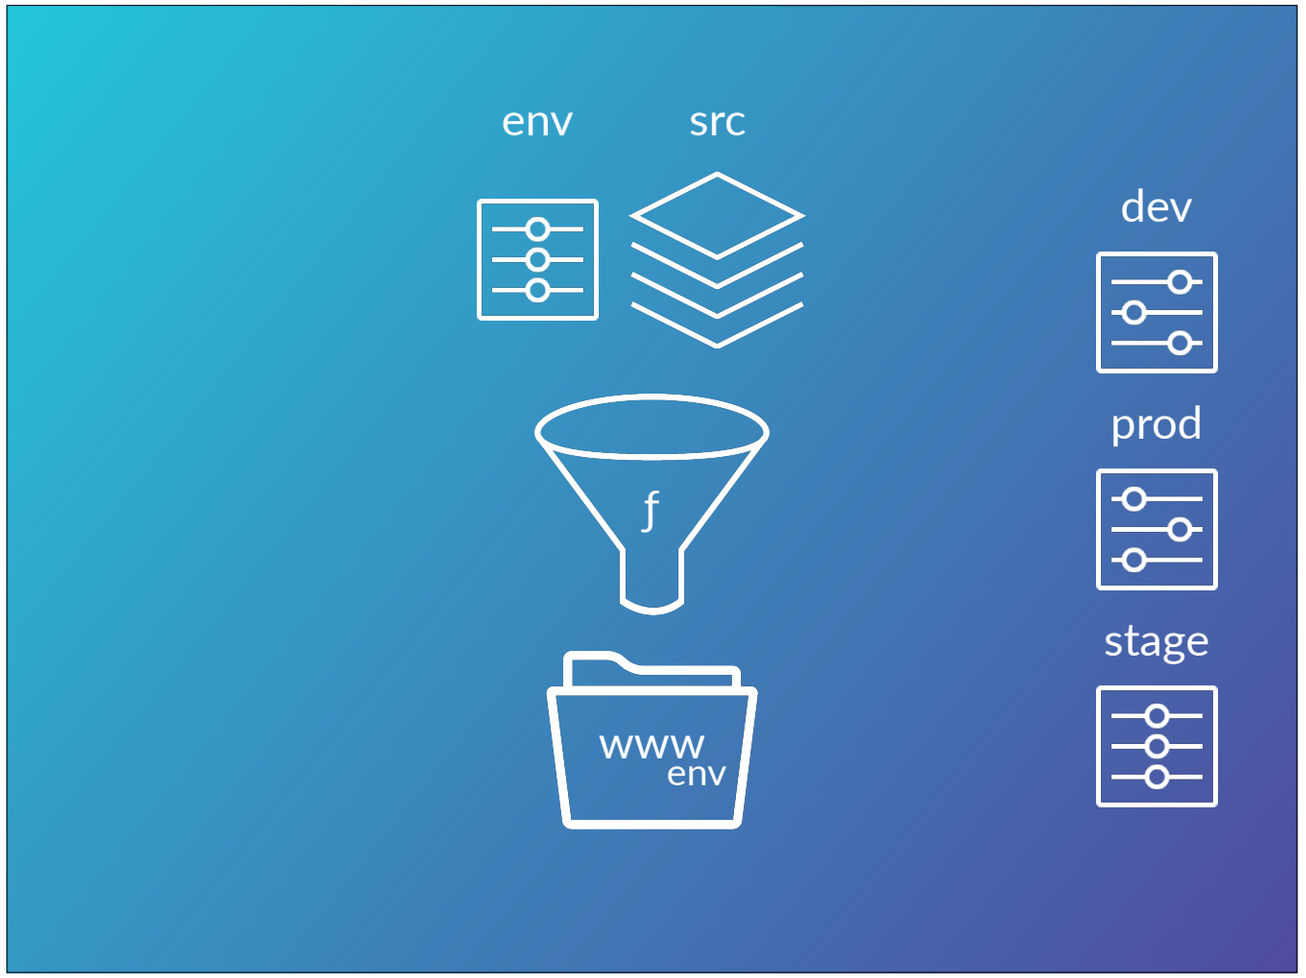
f: src -> www

hooks

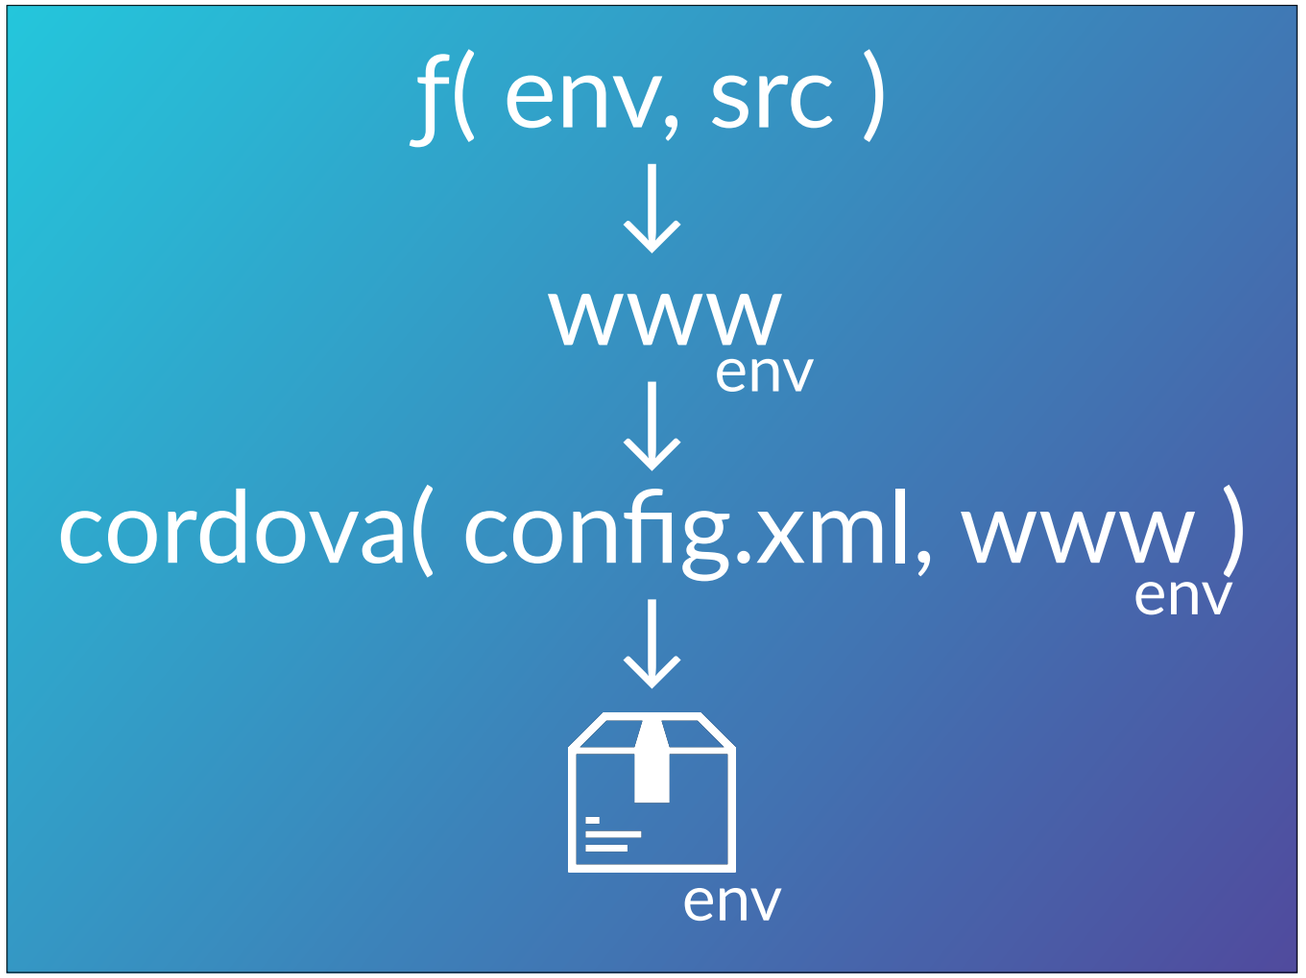
before_prepare

after_prepare

problem: hard to maintain because hooks live in a project



f: [src, env] -> www_env



need to merge `env` (www related configuration) and `config.xml` (cordova related configuration)

we have 1 app for multiple platforms who can contain multiple env.

merge config.xml && env du www -> `tarifa.json`

★

shared practices

★

build system agnostic

TODO

- add/remove/list configurations with cli
- watch for multiple devices
- allow to redefine added cordova plugins in configurations
- overwriting project plist or AndroidManifest.xml
- …
